

Silicone Clip for Flexible Swimsuit

Ref. B1939-G

Silicone fixing clamp for flexible swimsuits models B1939-2770 and B193-RGB, ideal for securely fixing the flexible swimsuit to any type of surface. It is easy to fix thanks to its flexible design made of silicone. It has holes for screws, which allows to keep the flexible swimsuit in place regardless of the passage of time or the type of placement. We recommend its use when a lighting installation is going to be made that requires making shapes with LED strips or washers, such as angles or installations in which the LED strip or the washer must be held on a wall to achieve a certain lighting effect, the clips are resistant and will do a great job giving firmness to the LED installation.
